Subject: Letter of recommendation

September 19, 2006

To Whom It May Concern:

Peter Schueren of Car Technology, Cologne, Germany worked on my Team on two separate programs.

Between 2001 and 2003 Peter was responsible for the intake manifold and the EGR valve housing/mixer for V8 Lion Program conducted as a Joint Venture w/ Ford Motor Co. in Aachen, Germany. During this period Peter impressed us w/ his design skills, ingenuity and good work ethic. Peter's design of the EGR mixing device was very effective, unique and feasible for production. Peter and International applied for a US Patent for this design.

It was because of Peter's performance we requested that Car Technology assign Peter to help us w/ some design work on different Program in the US, between 2004 and 2006. This time Peter was responsible for the design work on packaging the EGR system (including cooling lines) on the International V8 engine for Ford Motor Co. Again, Peter was recognized for his design skills, hard work and willingness to surrender his personal schedule to meet the Program's aggressive deadlines.

Peter is, by all means, an engineer I would like to have on my Team.

Andrew K. Stobnicki
