MARTIN R. ZIELKE – DIRECTOR, V-114 ENGINEERING INTEGRATOR - ENGINE GROUP

To Whom This May Concern,

This letter is to document the work that Peter Schueren performed while being contracted for the Lion V8 program in Aachen Germany during the years of 2001-2003. Peter's assignments included concept packaging & detail design of the air inlet system; interfacing with the vehicle team for packaging, the vehicle CAC connection, through the cam cover which had an integrated inlet plenum. Several concepts were proposed by Peter to deal with the difficult packaging space and maintain proper engine function. In the end, the designs yielded 2 designs that were patented. This illustrates the creativity and innovation that Peter has in addressing significant design issues. Peter possess the positive trait of drive for solutions in the way he approaches the challenges he is given.

Since the above assignment, Peter played an important role as designer (concept & detail) and coordinator between European suppliers, International, and our customer on an EGR system redesign project. Without his design proposals and his ability to coordinate and reach compromise with all parties involved, the success at meeting the critical timing would not have been achieved. Following the successful completion of the EGR project, Peter has been involved in several other assignments with International, including on-site visits for several months at a time.

I appreciate the innovative and quality work that Peter consistently delivers.

Martin R. Zielke
Director, V-114 Engineering Integrator
